

**Suppl. Fig. 1. Relation of cell associated VL in LNmes and plasma VL and A3G levels in LNmes.**

Cell associated viral load in LNmes, depicted as log transformed number of infectious cells per  $10^6$  LNmes cells, was correlated with plasma viral load (A) and A3G mRNA levels in LNmes (B). Viral load is depicted as log-transformed RNA copies per millilitre (ml) plasma. Relative APOBEC3 mRNA levels are shown in copy numbers per 100 copies of GAPDH in LNmes cells.  $r$ , Spearman's correlation coefficient; line shows nonlinear regression;  $p$ , P value;
